

Elizabeth Tang

New York, NY | Cell: (917)-551-0393 | et362@cornell.edu | <https://github.com/elizabeth-tang>

EDUCATION

Cornell University, College of Engineering

Major in Computer Science; Minor in Business, AI and Data Science

Cumulative GPA: 3.93; Dean's List since Enrollment

Relevant Coursework: Data Structures, Algorithms, Operating Systems, Machine Learning, Databases, Distributed Computing

Ithaca, NY

Expected May 2025

Stuyvesant High School

Cumulative GPA: 96 (UW); National Merit Finalist, AP Scholar with Distinction

New York, NY

September 2017 - June 2021

EXPERIENCE

Millennium Management - Equities AI

Remote

AI Engineer Intern

June 2024 - Aug 2024

- Developed a LLM-powered Streamlit app to answer questions over tabular data. Created a pipeline to generate a golden dataset used to evaluate the performance of the app across different LLMs, prompting techniques and table formats. Achieved 95% accuracy
- Built a sell-side broker email summarizer to aggregate, process and synthesize timely insights on specific stock tickers. Evaluated the use of HuggingFace embedding models vs LLMs for the purpose of reranking and denoising emails
- Prototyped an AI agent to flexibly decompose a query and answer each sub-query with research tools
- Explored using LLMs to build a knowledge graph relationship representation from a corpus of financial text data

Genius Sheets (Venture-backed Generative AI Startup)

Remote

Software + AI Engineer Intern

June 2023 - May 2024

- Utilized prompt engineering and GPT-4 via Langchain to automatically create validation datasets for retrieval augmented generation
- Fine-tuned a GPT-3.5 model to decrease data pipeline latency by 30%
- Conducted research on Text-to-SQL and code generation projects to identify frameworks for potential integration into our engine

Cornell Digital Tech & Innovation - Courseplan.io

Ithaca, NY

Technical Product Manager + Software Developer

February 2023 - Present

- Led a team of ~5 developers; onboarded new developers, set goals and planned sprint tasks to release 3 new features in a semester
- Contributed to code reviews and pull requests for the web-app using Github
- Implemented the multiple plans feature linking Vue and Firebase; wrote automated frontend tests using Cypress

Cornell Quant Fund

Ithaca, NY

Quantitative Trader and Software Developer

September 2021 - Present

- Devised a ML-based quantitative trading strategy to algorithmically enact merger arbitrage in tech stocks (Deep Dive Project) and pairs-trading in cryptocurrencies (Blockchain Subteam)
- Implemented portfolio visualizations and trade logging for the Cornell Quant Fund backtesting Python package

EPIC Insurance Brokers & Consultants

Remote

Cybersecurity Risk Management Intern

June 2022 - August 2022

- Crafted a proposal to push for emerging network security controls and incident response plans
- Wrote a Python script to collect and analyze data from the Specially Designated Nationals List to identify growing cyber risk management threats to clients

PROJECTS

Let's Roll

- Created a React JS web-app to reduce food insecurity among college students by connecting them to dining halls, restaurants and their peers that have excess food to donate

Set Trading

- Created and backtested an algorithmic trading strategy using a long-short term memory model to predict future stock prices

TECHNICAL SKILLS

Technical Skills: Java, Python (TensorFlow, Langchain), CSS, HTML, Javascript, Typescript, React, Vue, Tableau, Figma, SQL

Certifications & Training: Bloomberg Certification in Market Concepts, AWS Intro to ML and Reinforcement Learning
